

Convene AI — Deployment & Google OAuth Setup Guide

A Step-by-Step Manual for Repository Owners & Vercel Administrators

Key Architecture Note: The frontend code is already 100% written and integrated with `supabase.auth.signInWithOAuth({ provider: 'google' })`. No additional code changes are needed. The repository owner only needs to perform a one-time setup in Google Cloud Console and paste the keys into Supabase.

Part 1: Retrieve OAuth Callback URL from Supabase

1. Log in to <https://supabase.com/dashboard> and select the **Convene AI** project.
2. In the left navigation menu, click **Authentication** (user icon) → **Providers**.
3. Find **Google** in the providers list and click to expand it.
4. Locate the field labeled **Callback URL (for OAuth)**. It looks like:

```
https://<your-project-id>.supabase.co/auth/v1/callback
```

5. Copy this exact URL. You will paste it into Google Cloud Console in the next part.

Part 2: Create OAuth Credentials in Google Cloud Console

1. Navigate to <https://console.cloud.google.com/> and sign in with your Google account.
2. Click the top project dropdown → **New Project** → Name it **Convene AI** → Click **Create**.
3. In the left sidebar or search bar, navigate to **OAuth consent screen**:
 - Select **External**, then click **Create**.
 - App Name: **Convene AI**
 - User support email: Select your email address.
 - Developer contact email: Enter your email address.
 - Click **Save and Continue** through Scopes and Test Users (default settings are sufficient).
4. In the left sidebar, click **Credentials** → Click **+ CREATE CREDENTIALS** → Select **OAuth client ID**:
 - Application type: **Web application**
 - Name: **Convene AI Web Client**
 - **Authorized JavaScript origins**: Add the following URLs:
 - <https://<your-project-id>.supabase.co>
 - <https://<your-app-name>.vercel.app> (your Vercel live domain)
 - <http://localhost:3000> and <http://localhost:3003> (for local development)
 - **Authorized redirect URIs**: Paste the exact Supabase callback URL from Part 1:
 - <https://<your-project-id>.supabase.co/auth/v1/callback>
5. Click **Create**. Copy the generated **Client ID** and **Client Secret**.

Part 3: Enable Google Provider in Supabase

1. Return to the **Supabase Dashboard** → **Authentication** → **Providers** → **Google**.
2. Toggle the switch to **ON (Enabled)**.
3. Paste the **Client ID** and **Client Secret** obtained from Google Cloud Console.

4. Click **Save** at the bottom of the section.

Part 4: Configure Supabase URL Whitelist for Vercel

1. In Supabase, click **Authentication** → **URL Configuration**.
2. Set **Site URL** to: `https://<your-app-name>.vercel.app`
3. Under **Redirect URLs**, add the wildcard entry: `https://<your-app-name>.vercel.app/**`
4. Click **Save**.

Part 5: Vercel Redeployment & Environment Variables

1. Go to <https://vercel.com> → Select your **convене-ai** project.
2. Under **Settings** → **Environment Variables**, verify these 4 variables exist:
 - NEXT_PUBLIC_SUPABASE_URL (Your Supabase project URL)
 - NEXT_PUBLIC_SUPABASE_ANON_KEY (Public anon key)
 - SUPABASE_SERVICE_ROLE_KEY (Private service role key)
 - GEMINI_API_KEY (Google Gemini API key)
3. Under the **Deployments** tab, click **Redeploy** on the latest commit.

Part 6: Verified User Journey on Live Deployment

Step	Screen / Route	User Action & System Response
1	Landing Page (/)	User reads value proposition and clicks Sign in with Google .
2	Sign-in Screen (/signin)	User clicks Continue with Google , initiating Supabase OAuth.
3	Google Consent	User picks Google account; Google authenticates and redirects to Supabase.
4	Onboarding (/account-creation)	User selects Role (President, Lead, Volunteer) and names Club/Event.
5	Dashboard (/dashboard)	User enters command center with live Kanban, Roster, RAG, and AI Copilot.
